Art Unit: 1652

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-2, and 20-21drawn to isolated polypeptides encoding human kinases, classified in class 435, subclass 194.
- Claim 3, drawn to antibodies which bind said kinases, classified in class
 530, subclass 387.1.
- III. Claims 4 -6, 8-11 and 22-23 drawn to isolated nucleic acids encoding said kinases, vectors an host cells comprising said nucleic acids and methods of expressing said nucleic acids, classified in class 435, subclass 194.
- IV. Claim 7, drawn to a transgenic non-human animal comprising said nucleic acids, classified in class 800, subclass 4.
- V. Claims 12-13, drawn to methods of detecting nucleic acids utilizing said kinase encoding nucleic acids as probes in a hybridization assay, classified in class 435, subclass 6.
- VI. Claims 14-16 and 19, drawn to methods of identifying compounds that bind or modulate the activity of said kinases, classified in class 435, subclass 15.
- VII. Claim 17, drawn to a pharmaceutical composition comprising the modulators of said kinases, classification unknown. This is because classification depends on the structure of modulators. Since applicant did not define the structure of said modulators classification is not possible.
- VIII. Claim 18, drawn to methods of treatment comprising utilizing the modulators of said kinases, classified in class 514, subclass 789.

Art Unit: 1652

The inventions are distinct, each from the other because of the following reasons:

The polypeptides of Group I, the antibodies of Group II, the DNA of Group III, the transgenic animal of Group IV, and the modulators of Group VI are each patentably distinct from the other because each product has an independent chemical structure and function.

The polypeptides of Group I and the antibodies of Group II, the transgenic animal of Group III are each unrelated to the methods of Group V, VII or VIII because said products are neither made nor used by said methods.

Inventions III and V are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the DNA of Group III can be used in recombinant production of polypeptides which is a totally different method then the hybridization assay of Group V.

The DNA of Group III is unrelated to the methods of Group VI or VIII because said product is neither made nor used by said methods.

Inventions VII and VI or VIII are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case antibodies may

Art Unit: 1652

be used for identifying modulators of Group VI or for treatment of diseases mediated by said kinases of Group VIII which are entirely different products than the modulators of Group VII.

The modulators of Group VII are unrelated to the method of Group V because said products are neither made nor used by said method.

Methods of Group V, VII and VIII are each patentably distinct from the other because each method has different steps and different end-points.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter as shown by their separate classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

The examiner has required restriction between product and process claims.

Where applicant elects claims directed to the product, and a product claim is subsequently found allowable, withdrawn process claims that depend from or other wise

Art Unit: 1652

include all the limitations of the allowable product claim will be rejoined in accordance with the provision of MPEP section 821.04. Process claims that depend from or otherwise include all the limitations of the patentable product will be entered as a matter of right if the amendment is presented prior to final rejection or allowance, whichever is earlier. Amendments submitted after allowance are governed by 37 CFR 1.312.

In the event of rejoinder, the requirement for restriction between the product claims and he rejoined process will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104, Thus, to be allowable, the rejoined clams must meet all the criteria for patentability including the requirement of 35 U.S.C. 101, 102, 103 and 112. Until an alerted product claims is found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained. Withdrawn process claims that are not commensurate in scope with an allowed product claim will not be rejoined, See "Guidance on Treatment of Product and Process Claims in light of *In re Ochiai, In re Brouwer* and 35 U.S.C. section 103(b)," 1184 O.G. 86(March 26, 1996). Additionally, in order to retain the right to rejoinder in accordance with the above policy, Applicant is advised that the process claims should be amended during prosecution either to maintain dependency on the product claims or to otherwise include limitations of the product claim. Failure to do so may result in a loss of the right to rejoinder.

Art Unit: 1652

Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP section 804.01.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Maryam Monshipouri whose telephone number is (571) 272-0932. The examiner can normally be reached on 7:00 a.m to 4:30 p.m. except for alternate Mondays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ponnanthapu Achutamurthy can be reached on (571) 272-0928. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
